

컴퓨터공학 All in One

C/C++ 문법, 자료구조 및 심화 프로젝트 (나동빈) 제 67강 - 오목 혼자하기 판정 기능 구현하기

게임 시작 버튼 디자인하기

상태 라벨 디자인하기

싱글 플레이를 위한 변수 선언

```
private const int rectSize = 33; // 오목판의 셀 크기
private const int edgeCount = 15; // 오목판의 선 개수

private enum Horse { none = 0, BLACK, WHITE};
private Horse[,] board = new Horse[edgeCount, edgeCount];
private Horse nowPlayer = Horse.BLACK;

private bool playing = false;
```

승리 판정 함수

```
private bool judge() // 승리 판정 함수
     for (int i = 0; i < edgeCount - 4; i++) // 가로
           for (int j = 0; j < edgeCount; j++)</pre>
               if (board[i, j] == nowPlayer && board[i + 1, j] == nowPlayer && board[i + 2, j] == nowPlayer &&
                           board[i + 3, j] == nowPlayer && board[i + 4, j] == nowPlayer)
                                 return true;
     for (int i = 0; i < edgeCount; i++) // 세로
          for (int j = 4; j < edgeCount; j++)</pre>
               if (board[i, j] == nowPlayer && board[i, j - 1] == nowPlayer && board[i, j - 2] == nowPlayer &&
                           board[i, j - 3] == nowPlayer && board[i, i - 4] == nowPlayer)
                                 return true;
     for (int i = 0; i < edgeCount - 4; i++) // Y = X 직선
          for (int j = 0; j < edgeCount - 4; j++)
                if (board[i, j] == nowPlayer \& board[i + 1, j + 1] == nowPlayer \& board[i + 2, j + 2] == nowPlayer \& board[i + 2, j + 2] == nowPlayer & board[i + 2, j + 2] == nowPlayer & board[i + 2, j + 2] == nowPlayer & board[i + 2, j + 2] == nowPlayer & board[i + 2, j + 2] == nowPlayer & board[i + 2, j + 2] == nowPlayer & board[i + 2, j + 2] == nowPlayer & board[i + 2, j + 2] == nowPlayer & board[i + 2, j + 2] == nowPlayer & board[i + 2, j + 2] == nowPlayer & board[i + 2, j + 2] == nowPlayer & board[i + 2, j + 2] == nowPlayer & board[i + 2, j + 2] == nowPlayer & board[i + 2, j + 2] == nowPlayer & board[i + 2, j + 2] == nowPlayer & board[i + 2, j + 2] == nowPlayer & board[i + 2, j + 2] == nowPlayer & board[i + 2, j + 2] == nowPlayer & board[i + 2, j + 2] == nowPlayer & board[i + 2, j + 2] == nowPlayer & board[i + 2, j + 2] == nowPlayer & board[i + 2, j + 2] == nowPlayer & board[i + 2, j + 2] == nowPlayer & board[i + 2, j + 2] == nowPlayer & board[i + 2, j + 2] == nowPlayer & board[i + 2, j + 2] == nowPlayer & board[i + 2, j + 2] == nowPlayer & board[i + 2, j + 2] == nowPlayer & board[i + 2, j + 2] == nowPlayer & board[i + 2, j + 2] == nowPlayer & board[i + 2, j + 2] == nowPlayer & board[i + 2, j + 2] == nowPlayer & board[i + 2, j + 2] == nowPlayer & board[i + 2, j + 2] == nowPlayer & board[i + 2, j + 2] == nowPlayer & board[i + 2, j + 2] == nowPlayer & board[i + 2, j + 2] == nowPlayer & board[i + 2, j + 2] == nowPlayer & board[i + 2, j + 2] == nowPlayer & board[i + 2, j + 2] == nowPlayer & board[i + 2, j + 2] == nowPlayer & board[i + 2, j + 2] == nowPlayer & board[i + 2, j + 2] == nowPlayer & board[i + 2, j + 2] == nowPlayer & board[i + 2, j + 2] == nowPlayer & board[i + 2, j + 2] == nowPlayer & board[i + 2, j + 2] == nowPlayer & board[i + 2, j + 2] == nowPlayer & board[i + 2, j + 2] == nowPlayer & board[i + 2, j + 2] == nowPlayer & board[i + 2, j + 2] == nowPlayer & board[i + 2, j + 2] == nowPlayer & board[i + 2, j + 2] == nowPlayer & board[i + 2, j + 2] == nowPlayer & board[i + 2, j + 2] == nowPlayer & board[i + 2, j + 2
                           board[i + 3, j + 3] == nowPlayer && board[i + 4, j + 4] == nowPlayer)
                                return true;
     for (int i = 4; i < edgeCount; i++) // Y = -X 직선
          for (int j = 0; j < edgeCount - 4; j++)
               if (board[i, i] == nowPlayer && board[i - 1, i + 1] == nowPlayer && board[i - 2, i + 2] == nowPlayer &&
                           board[i - 3, j + 3] == nowPlayer && board[i - 4, j + 4] == nowPlayer)
                                 return true;
     return false:
```

새로고침 함수

```
private void refresh()
{
  this.boardPicture.Refresh();
  for (int i = 0; i < edgeCount; i++)
    for (int j = 0; j < edgeCount; j++)
    board[i, j] = Horse.none;
}</pre>
```

게임시작 버튼 이벤트 함수

```
private void playButton_Click(object sender, EventArgs e)
 if(!playing)
   refresh();
   playing = true;
   playButton.Text = "재시작";
   status.Text = nowPlayer.ToString() + " 플레이어의 차례입니다.";
 else
   refresh();
   status.Text = "게임이 재시작되었습니다.";
```

오목판 마우스 클릭 이벤트 함수 ①

```
private void boardPicture_MouseDown(object sender, MouseEventArgs e)
  if(!playing)
   MessageBox.Show("게임을 실행해주세요.");
   return;
 Graphics g = this.boardPicture.CreateGraphics();
  int x = e X / rectSize:
 int y = e.Y / rectSize;
  if (x < 0 \mid | y < 0 \mid | x > = edgeCount | | y > = edgeCount)
   MessageBox.Show("테두리를 벗어날 수 없습니다.");
   return;
  if(board[x, y] != Horse.none) return;
  board(x, y) = nowPlayer;
```

오목판 마우스 클릭 이벤트 함수 ②

```
if(nowPlayer == Horse.BLACK)
 SolidBrush brush = new SolidBrush(Color.Black);
 a.FillEllipse(brush. x * rectSize. v * rectSize. rectSize. rectSize);
else
 SolidBrush brush = new SolidBrush(Color.White);
 g.FillEllipse(brush, x * rectSize, y * rectSize, rectSize, rectSize);
if(judge())
 status.Text = nowPlayer.ToString() + "플레이어가 승리했습니다.";
 plaving = false;
 playButton.Text = "게임시작";
else
 nowPlayer = ((nowPlayer == Horse.BLACK) ? Horse.WHITE : Horse.BLACK);
 status.Text = nowPlayer.ToString() + " 플레이어의 차례입니다.";
```

솔루션 빌드 및 실행
